How to get 400,232 backlinks after 8 hours of link building

Section 01 : Fast SEO crash course

(basic info, you can skip to 02 : Link Velocity and Link popularity which is a must read)

On Page SEO

This is where SEO starts, plain and simple; if your site is not optimized for the keywords you are targeting, you've lost the battle before you've even started.

In this chapter I will be pointing out the key features your site needs so that your site looks professionally optimized to the search engines! On page factors are just as important as building links and other aspects involved getting your site to the TOP!

Title & META Tags

Your Title and META tags are the first thing the search engine spiders see when visiting your site! Be sure that your home page TITLE tag is related to the keywords you identified!

Here is the META tag sequence I use on all my sites that gives me top rankings! Feel free to use as a template!

```
<title> Title Goes Here...</title>
```

```
<meta content="keyword 1, keyword 2, keyword 3, keyword 4" name="keywords">
```

```
<meta content="Your description goes here..." name="description">
```

```
<meta content="10 days" name="revisit-after">
```

```
<meta content="index, follow" name="robots">
```

```
<meta content="All" name="Robots">
```

```
<meta content="index, follow" name="googlebot">
```

```
<meta content="global" name="DISTRIBUTION">
```

Important Pages to Include

Here is a list of pages that you must include on your website. The spiders (search engine bots) will go to crawl your site and will be looking for these pages, you can simply put them in the footer or wherever you like.

1. Contact page – It's crucial that your prospects/visitors have a way of contacting you.

2. Disclaimer – If you sell products or information in particular on your site, it is a good idea to use a disclaimer to keep your visitors, in the “know”.
3. Privacy Policy – Spam used to be a big issue and mostly everyone hates it! Let your visitors know that you will keep the information you gather from them safe, i.e. their email address.
4. Sitemap – This makes it easy for the spiders to scan your site, making each page on your site available for anyone to see. It gives your webpage more structure. I will go over how to create a sitemap further in the ebook.
5. Five pages of Content – Google and other search engines look at how much quality content you have on your website that is relevant to the keywords you are targeting. Be sure to have at least 5 articles/web pages with quality content on them.

Creating a Sitemap

These days creating a sitemap is very easy; there are FREE automated tools that will do this for you. You want to have a sitemap on your site because it will make scanning your site a lot faster, thus indexing you're all your webpage's a lot of faster.

The spiders will visit your sitemap and see all the pages that your website includes, instead looking at the one by one.

So here's how to create the file...you would simply go to:

www.xml-sitemaps.com

You would simply enter your website URL and it will return an XML file that you would upload to your server to appear on your site! This is too easy NOT to do it!

Robots.txt File

I don't want to go all nerdy on you and throw a whole bunch of techie stuff your way but it is important to know what your site needs. As more and more people catch on to the power of marketing on the internet, the more valuable this information becomes!

So what is a robots.txt file? It's basically a text file that's created with notepad or any compatible text editor. You can add certain web pages on your site that you DO NOT want the search engines to crawl.

The reason for this could be to keep your download page for your customers from showing up in the SERPS or showing duplicate content on your site. This way it won't seem like your spamming the search engines with non-sense.

Even if you don't have any web pages that DO NOT want to show up in the SERPS it is a good idea to have one uploaded and on your site so the search engines know that you're playing by the rules!

So here's how you create a “Robots.txt” file, these are very simply to make despite the name. ☺

Like I stated before you would simply open notepad or your favorite text editor. This lines you will enter in this text file are as follows:

User-Agent: [Spider or Bot name]

Disallow: [Directory or file name]

It's pretty much self explanatory; you tell which spider, i.e. Google, MSN or Yahoo not to crawl the "Disallow" listed sites. That's all to it, too easy right?

Let me give you a few examples so you know exactly how this should look when you create your robots.txt file.

Let's say you DO NOT want the Google bots (spiders) from crawling a particular page on your site. This is how it would look:

User-Agent: Googlebot

Disallow: /members

If you want to allow the spiders to index everything on your site and just want to have the robots.txt file on your site for good measures. This is how it would look. Feel free to copy/paste for your own use!

User-Agent: *

Disallow:

Super Linkbuilding

Building links is also known as "Off-Page SEO". It's all about the links, in most cases; the site with the most links will win in an SEO battle! Provided that the site is optimized for that certain keyword and followed all the On-Page SEO criteria.

How to Build Links & Use Anchor Text

You want to build your links in a way that looks natural to the search engines. I would say about 10 – 20 links per day will do.

Now about your anchor text, for those who don't know what anchor text is, here is the definition right from Wikipedia:

The anchor text, link label or link title is the visible, clickable text in a hyperlink. The words contained in the Anchor text can determine the ranking that the page will receive by search engines.

You want to alternate your keywords for anchor text (if that made sense ☺) so the keyword usage for anchor text would look something like this:

Keyword #1: Use 70% of the time for anchor text

Keyword #2: Use 20% of the time

Keyword #3: Use 10% of the time

Keyword #4: Use 5% of the time

Keyword #5: Use 5% of the time

Now you don't have to go by those numbers exactly but close to it will make sure that the search engine bots don't recognize your site for spamming for one keyword, with the sole intention of ranking for a certain keyword.

Section 02 : Link Velocity and Link Popularity

When it comes to search engines, especially Google, it is important to have anchor text diversity in your link building. This means that you should build links to your site for more than one keyword. Anything else will most likely raise some red flags with Google and your site won't get the desired rankings.

You could do everything right, spin the anchor text just right, get all the right links from all the right places, but if you don't do it in a steady and natural way, you're not going to see very good results.

EXAMPLE: You have a site that, based on your research and estimates, will need around 500 good links to rank at the top of page 1 of Google for your keywords.

Your impulse may be to get those rankings as fast as you can, so you get 200 links the first week, hoping that you'll achieve those rankings fast. You then get another 200 the next week and 100 the week after.

Now, while this action may get you to the first page of Google, in most cases it will be a temporary thing, because as soon as Google notices that links have stopped coming to your site, your site will go down in rankings.

The consequence of this type of link building behavior will result in the following: you will need 2 or 3 times more backlinks to achieve the same result just because Google now expects you to get a large number of links on a continuous basis. If the links stop, Google will assume that your site is no longer as popular and its rankings will fall or be harder to maintain.

Link diversity is important

There are two kinds of link diversity and both are important. The first is geographical. This means that it is important to get links from a wide range of IP addresses. Getting 50 links from 40 C-class IP addresses is better than getting 100 links from 20 different IP's.

This is very important to remember if you're involved in a link network or blog network where there are many sites hosted on the same IP address.

Even though you may get a lot of backlinks, they won't mean very much in terms of link juice and getting higher search engine rankings.

The other kind of link diversity is basically about getting links from different types of website platforms. For example, if you focus your link building on blog commenting, don't just comment on Wordpress blogs.

You should diversify by posting on Blogger, TypePad, Drupal and Joomla based blogs as well. You will learn later how to find ANY type of website that can be used to build backlinks.

Why?

Some people worry about link networks and leaving a "footprint" that Google will track down and penalize. Well, you are basically leaving a huge footprint by getting the majority of your links from the same type of sites. Example: almost all Wordpress blogs have a "powered by Wordpress" line in the footer of the blog theme. That's a footprint!

It doesn't matter if you build 10 or 100 backlinks every day, the key is to build them continuously and from a variety of sources.

Section 03 : SEO Footprints

What Is A Footprint?

A footprint is the “track” left on the internet that can be used to locate specific pages on the internet or find specific types of “scripts” that you can submit to.

- Link to a deep page instead of to your Home/Main page
- Do not vary the Anchor Text when going after a specific keyword
- IP Diversity is a good thing... even at the expense of Page Rank. Which means that links from many IP addresses is a good thing, even if they don't have great page rank.

How Can You Find Footprints?

Basic Query

The easiest and most basic search you can use when looking for the various “Platforms” is the “Powered By” query.

You simply take the phrase “powered by” and the entire platform name or the first part, (e.g., “powered by [platform]”, “powered by phpbb”)

Examples:

"Powered by vbulletin" "Powered by phpbb" "Powered by pligg"

General Link Building Queries

- “add url”
- “add site”
- “add website”
- “add your site”
- “add a url”
- “add * url”
- “add * site”
- “add * website*”
- “submit url”
- “submit site”
- “submit website”
- “submit your site”
- “submit a url”
- “submit * url”
- “submit * site”
- “submit * website”
- “suggest url”
- “suggest site”
- “suggest website”
- “suggest your site”
- “suggest a url”
- “suggest * url”
- “suggest * site”
- “suggest * website”

- keyword sponsors
- keyword sponsorship
- keyword sponsor charity
- keyword benefactors
- keyword donate
- keyword donations
- keyword donors
- keyword "add url" / "add * url"
- keyword "add site" / "add * site"
- keyword "add website" / "add * website"
- keyword "submit url" / "submit * url"
- keyword "submit site" / "submit * site"
- keyword "submit website" / "submit * website"
- keyword "suggest url" / "suggest * url"
- keyword "suggest site" / "suggest site"
- keyword "suggest website" / "suggest * website"
- keyword "recommended links"
- keyword "recommended sites"
- keyword "recommended resources "
- keyword "favorite links"
- keyword "favorite sites"
- keyword bookmarks
- keyword resources
- "list * keyword * sites"
- "add comment" keyword / "add * comment"
- "post comment" keyword / "post * comment"
- keyword "leave a comment" / "leave * comment"
- keyword "no comments"
- keyword "notify me of follow-up comments"
- keyword "wiki" (site:.edu)
- keyword forum / keyword forums
- keyword discussion boards
- keyword members
- keyword join
- keyword "advertiser testimonials"
- keyword "related URLs" / "* related URLs"
- keyword "related sites" / "* related sites"
- "your location" +"add url"
- "your location" +"submit site"
- "your location" +"suggest a site"
- "your location" +directory

Example: Tactics To Retrieve Angela's and Paul's Links

Angela's Links
Google <http://www.google.com/search?q=angelae8654>

<http://www.google.com/search?hl=en&source=hp&q=%22http%3A%2F%2Fangelasdiscountmarket.com+%2Fangela.html%22&aq=f&oq=&aqi=>
<http://hiderefer.org/?http://www.google.com/search?hl=en&q=angelae8654&btnG=Search>
http://angelasdiscountmarket.com/backlink_builder.html

Yahoo <http://angelasdiscountmarket.com>
<http://search.yahoo.com/search?p=linkdomain%3A+angelasdiscountmarket.com+-site%3Aangelasdiscountmarket.com&fr=yfp-t-501&toggle=1&cop=mss&ei=UTF-8>

BacklinkWatch

<http://backlinkwatch.com/?backlinkurl=http://www.pjsqualitybacklinks.com/>

Paul's Links

Google

<http://www.google.com/search?q=pj413>

<http://www.google.com/search?q=http://www.pjsqualitybacklinks.com/>

Yahoo

<http://www.pjsqualitybacklinks.com/>
<http://search.yahoo.com/search?p=linkdomain%3Apjsqualitybacklinks.com+-site%3Apjsqualitybacklinks.com&fr=yfp-t-501&toggle=1&cop=mss&ei=UTF-8>

For competitor backlinks yahoo lookup:

linkdomain:competitor.com -site:competitor.com
